Assignment Tracker

My Idea for Assignment 3 is to make an Assignment Tracker. Where the user can input their assignments, how many marks are worth, how much the assignment is weighted so they know the importance of it, add a description of what it is and what class it's for, and lastly when it is due. Of course,e they can alter the assignment like if they made a mistake typing in the due date or assignment name and they can delete it whenever they please. I want it to look similar to this picture.

ASSIGNMENT TRACKER

WEEK OF:	YEAR:

✗	ASSIGNMENT	CLASS	DUE DATE

CRAZY LAURA

Or something like this.

Assignment Tracker

Month _____			Semester _____	
Priority	Class	Assignment	Due	Done

This tracker's basis is to track the students'/users' assignments through MongoDB. It should be able to display the assignments after the submit button is pressed and should be able to stay on that page until it is deleted.
